

**Concord Township Regraveling Work:** Crews continue to apply new gravel to select Concord Township roads. The project should be completed by Tuesday of next week, weather permitting. As mentioned last week, this is being done using a new method that drastically improves efficiency and quality, while minimizing wasted material. Crews prepped each road by first removing built-up organic shoulder material before placing the new gravel (see photos).

*Prep work to remove debris and organic shoulder material in progress (above) and completed (left).*

*Below: Application of 6" of new gravel follows using our recycling paver with compaction at the screed, and via the steel drum vibratory roller. The gravel material is placed evenly with minimal waste, and the new surface is well compacted and ready for traffic.*

Thank you, and please let me know if you have any questions or concerns.
